

Patterned Floorings

PRODUCT DESCRIPTION:

Patterned floorings are made on the basis of synthetic and natural rubbers. We manufacture interior basic and oil-resistant, special exterior types of various patterns.

USE:

The floorings ensure safe anti-slip stepping. They are used on various sloped surfaces, floors of sports facilities, floors of industrial buildings, etc.

STORAGE:

Temperature: ideal temperature: From +5 °C to +25 °C, permitted range -10 °C to +40 °C (depending on type, however long-term preferably lower). Do not store near heat sources (radiators, steam pipes). The room must be protected from moisture, condensation and direct weather influence. Rubber floors must be protected from direct sunlight and strong artificial light with UV component. Rubber rolls should be stored freely standing in an upright position. If stored flat, they must not be loaded with other heavy material to prevent permanent deformation. Rubber must not come into contact with oils, fats, solvents or other aggressive chemicals. The warehouse should not contain ozone-generating equipment (electric motors, high-voltage equipment), as ozone causes cracking of rubber.

WARNING:

At temperatures below 0 °C, rubber becomes stiff and brittle, therefore there is a risk of damage during handling. Before installation, the rubber should be acclimatized (approx. 24 hours at room temperature).

CARE AND CLEANING:

Clean with a sorghum broom or horsehair brush. No hard objects such as wire brushes may be used. They may be cleaned with a soap solution and wiped dry after cleaning. They must not come into contact with any acids, alkalis and solvents.
